VCU LOOP / SENSORS + HEIGHTS

REV9 CAD · Compact sensor labels · All dimensions in mm

Heater clamps: 1,104.9 between outermost centers

Four modeled clamps, each 50.8 wide; active heated length unknown

---

● S: surface TC ☾ L: Luna fiber ♦ P: penetrating TC

Heights are vertical: B–C excludes bends; A–D includes bends between the inclined-leg endpoints.

Outer loop height uses the main pipe bodies, including integral stubs; excludes jacket, exits and tank.

Blue pipework = jacket; red = heater clamps. * Heating-leg length is a projected span; active heat extent unknown.

S/P/L retain the Rev9 report IDs. Extra PTC-X and two jacket-port TCs are omitted here; sensing tips are not defined.
